

MobileMuster is the telecommunications industry's product stewardship program. It is accredited by the federal government and is 100% carbon neutral.

What we do

- Provide a **free and secure recycling program** for mobile phones & accessories, and other e-waste such as modems, landline phones, smart home tech and wearables.
- Ensure the recycling program meets the **highest environmental standard**.
- Provide a collection network of **thousands of drop-off points** Australia-wide.
- Partner with charities to **incentivise consumers** to recycle.
- Raise awareness of **reuse options** and recycling of unused mobile phones, as well as a range of e-waste.

How we do it

- Major handset manufacturers and network carriers voluntarily fund the program to enable a free recycling scheme for Australians.
- Partner with councils, retail stores, repair stores, schools, and other organisations to ensure an accessible network, there is a MobileMuster drop-off point within 10km for most of the Australian population.
- Offer rewards and recognition to top collecting sites to encourage greater recycling.
- Roll out annual campaigns as well as an 'always on' social media activity to build trust in the program, promote our partners, and educate consumers about the benefits of recycling.

Why we do it

Recycling our end-of-life mobile phones keeps these products out of landfill and maximises resource recovery.

- **Reduce** the need to extract and use raw materials, saving our natural resources in the process.
- **Improve** air quality by reducing demand for power used in mining, refining, processing, and shipping of raw materials.
- **Prevent** pollution and minimise hazardous waste going to landfill.

What we collect

All makes and models of mobile phones, including their chargers and accessories.

Mobile wireless internet devices.*

Smart watches, smart pens, tracking tags, and VR headsets.*

Modems, home landline phones, and TV streaming devices.*

Apple, Amazon, and Google smart speakers and smart digital hubs.*

*Accepted at Optus, Telstra, and Vodafone stores.

Safe, secure, trusted

MobileMuster recycles everything collected through the program; nothing is reused or resold. Any data left on phones is destroyed during the recycling process.

Recycle the right way.

Tackling frequently asked questions

What happens to mobile phones collected for recycling?

Mobile phones, accessories, and other accepted e-waste by MobileMuster are transported to one of two recycling facilities in Sydney and Melbourne. Products are dismantled manually with components separated into streams – circuit boards, metal, glass, plastics, and batteries.

Some plastics and metals are processed in Australia. Circuit boards, batteries, and other plastics are processed by our global e-waste recycler in their facility in Singapore. These materials are recovered and used in the manufacture of a range of products, including mobile phones, glass bottles, recycled plastic park benches, other electronics, mobile phone batteries, and jewellery.

Nothing we collect is reused or resold.

What happens to the data that may still be on a phone when it's recycled?

Consumers are encouraged to delete or transfer data they want to keep from the device before dropping it off for recycling, and MobileMuster offers guides on how to do this on our website.

However, any data left on the phone is completely destroyed during the recycling process.

If a mobile phone contains so many precious metals, including gold and silver, is MobileMuster making money off the phones we drop off?

No. MobileMuster is a not-for-profit program and continues to invest millions of dollars to enhance the scheme. The monetary value of materials recovered from phones to-date is in fact, a fraction of what has been spent on collecting, processing and promoting the scheme.

Do mobile phones end up in developing countries for recycling and how does MobileMuster ensure that recycling occurs at the highest environmental standard?

Everything collected through the MobileMuster program is dismantled in Australia. Some materials are processed and recycled in Australia, while others are done overseas, including Singapore, where there is the appropriate infrastructure, capacity, and market demand.

MobileMuster believes in transparency and accountability, so we ensure that our recycling partner maintains the relevant accreditation and regular audits are conducted on the recycling process.
